

## ABB Authorized Value Provider®

### ABB Authorized Warranty & Non-Warranty Service

Reliability. Delivered.

*IPS provides ABB authorized "global VPI" rewinds up to 13.8 kV. The IPS Houston 14' x 17' VPI tank is the largest in the United States, and it is located in a dedicated winding clean room environment.*

#### **Anyone can repair; however, IPS can remanufacture back to ABB factory-approved standards**

As an ABB Authorized Value Provider (AVP), the IPS Beaumont and Houston service centers have preferential access to ABB engineering, technical, product and sales support, allowing IPS to repair ABB motors and generators back to factory-approved standards. Both of these service centers have completed and passed a formal ABB audit of the IPS Quality Management System, including repair procedures and processes, and are authorized to perform both Warranty and Non-Warranty service for ABB.

As the former service division for Reliance Electric, IPS also has exclusive rights to perform EnduraSeal® medium-voltage "global VPI" rewinds in the United States for ABB, Baldor and Reliance products. All IPS premium "global VPI" rewind technologies, including EnduraSeal, PowerSeal and Megaseal, are backed by an industry-leading 5-year winding warranty.

If you are looking to ensure your Return on Investment (ROI) and increase the lifecycle of your ABB machines, give IPS Beaumont and Houston a call. As an ABB Authorized Value Provider (AVP), we will ensure that all service, repair and parts are to ABB factory-approved standards.
