# NETA Accredited Companies

## Setting The Standard

### What is NETA

NETA is an association of leading electrical testing companies; visionaries committed to advancing the industry's standards for power system installation and maintenance to ensure the highest level of reliability and safety.

### NETA Certified Technicians

NETA certified technicians who have earned a level III or IV NETA Certification in electrical power systems testing bring the knowledge and field experience necessary to perform testing to industry standards. A NETA technician's work experience, education, and training keeps them current with new technologies and provides them the knowledge to perform testing across a wide variety of power systems.

### Safety

A NETA Accredited Company recognizes the safety program is paramount to making sure all other operational goals are met. Safety compliant means to uphold the highest standards in the industry: standards put forth by OSHA, ASTM, NFPA, IEEE, The National Safety Council, CSA, NEMA, and others. With a dedication to safety, each NETA Accredited Company implements procedures and continually reviews and updates the firm's safety program. **CONT**

## Third Party Testing

NETA Accredited Companies are independent electrical power systems testing service providers. They must be divested of competing service or manufacturing interests. As third-party auditors, they provide unbiased electrical testing results while ensuring accurate testing and reporting; never influenced by conflicting factors involved with budgeting, installation, and product manufacturing.

## Quality Assurance

The highest degree of quality is achieved when testing services are performed by a NETA certified technician and backed by a NETA accredited company. This unique combination ensures qualified personnel are supported by:

- Corporate Infrastructure
- The Latest Technology
- Calibrated Test Equipment
- Comprehensive Reporting and Documentation
- Professional Engineer Review
- System Function Test

## Total System Experience

NETA Accredited Companies employ a team of NETA certified technicians and support personnel experienced in all facets of electrical power system testing and maintenance, doing so in accordance with ANSI/NETA standards.

## NETA Equals Quality

NETA accreditation is not easy to attain. NETA Accredited Companies earn their accreditation through a rigorous application process conducted by the NETA association. This ensures that every NETA Accredited Company provides testing services to the highest standards of safety and reliability as specified by such entities as: ASTM, CSA, EASA, ICEA, IEEE, NEMA, NFPA, and UL. **NATL**
